Subject: Comments to the Chairman

ray asthen (sorry none avl) writes:

The n.a.b. thinks that the fcc dose not know what they can do and what they cant. They are saying that if you pass the microbrodcasting that it is going to interfere with big stations abailty to transmitt.

Now let me get this straight, 50,000+ watt is going to be harmoniced by a 1 watt transmitter thus causeing extreem interference with big radio and avation comm.

Lets get real.... With the low powered transmitters that are out their today, i find them stable in their transmission, and if the n.a.b is trying to say that the human race has been working with radio for how long? and we still cant build stable low powered transmitters...

My 7 year old son has a two way radio set that is streonger in watts than some of these "pirate radio" stations.. lets give these guys a break MR. Kennard, at one time a licenses for microbroadcasting was avl. but now it is not.. dont we have bigger things to worry about in radio signals, like people stealing cell comm. cramming peoples phone lines, ect... we have ham radio, CB radio,we are moving into the next century, take a stand aganst the n.a.b who dont care that the pirate radio operators are serving their neiborhoods by providing services by informing local community about thing going on in the aera,while big radio see the lissoners as nothing more that a market for advertisers..

thank you :Ray Asthen
